

# Recognising people using Gait analysis

Man-Leong Chan, *University of Southampton*

**Abstract**—The abstract goes here.

**Index Terms**—Computer Society, IEEEtran, journal, L<sup>A</sup>T<sub>E</sub>X, paper, template.

## 1 INTRODUCTION

THIS demo file is intended to serve as a “starter file” for IEEE Computer Society journal papers produced under L<sup>A</sup>T<sub>E</sub>X using IEEEtran.cls version 1.8 and later. I wish you the best of success.

## 2 IMAGE PROCESSING

### 2.1 Green screen and background removal

Our domain is a set of photos each with a subject in front of a green screen standing on a treadmill. Subject extraction requires the removal of the green screen as well as any background captured outside of the green screen area. Couple of samples of green screen color reveals the average screen color to be  $rgb(56, 175, 93)$ . Image area beyond the green screen area is cropped to remove excess background area.
